

CAMPUS HIRING 2026 • GENERATIVE AI

AI ENGINEERING INTERN

Help build the AI brain behind India's #1 Auto-Tech platform — LLMs, RAG pipelines and real product impact, from day one.

Gurugram & Jaipur

Internship

B.Tech

REPORTS TO

Head of AI

SQUAD

GenAI & ML Pod

CarDekho started as a car review site in 2008 and is now a **unicorn House of Brands** — CarDekho, InsuranceDekho, rupyy, Revv and CarDekho SEA — serving **millions of users every single day** across India and six countries. Backed by Sequoia, Hillhouse, Ratan Tata Trust, ICICI and HDFC Bank, we're now putting Generative AI at the center of how India buys, insures and finances vehicles. **This is where you come in.**

ABOUT THE **ROLE**

As an AI Engineer, you won't be watching Generative AI happen — you'll be shipping it. You'll get hands-on with LLMs, RAG pipelines and vector databases from week one, working alongside engineering, product and data teams to turn cutting-edge AI into features that millions of real users touch every day. Expect a steep learning curve, real ownership, and mentors who'll push you to go from "I studied this in college" to "I shipped this in production."

OPPORTUNITIES TO **WORK ON**

BUILD & SHIP GENAI FEATURES

- Support the development and deployment of Generative AI solutions, including RAG pipelines and vector databases
- Assist in integrating frameworks like LangChain and improving context-aware AI workflows

SHARPEN THE MODEL

- Monitor and evaluate model performance, quality, bias and reliability
- Apply prompt engineering and human-in-the-loop practices to continuously improve outputs

LEARN & COLLABORATE

- Work with real data using statistical and machine learning techniques
 - Collaborate directly with engineering, product and research teams to deliver AI features that reach production
-

TECH YOU'LL WORK WITH

LLMs

RAG Pipelines

Vector Databases

LangChain

Pydantic AI

Hugging Face

Python

PyTorch / TensorFlow

Prompt Engineering

FastAPI

WHAT YOU'LL BRING

GenAI Curiosity

Academic or project exposure to LLMs, RAG or fine-tuning — a thesis, hackathon or side project counts.

Prompt & Vector DB Basics

A working understanding of vector databases and how good prompt engineering shapes model output.

Strong Python

Comfort writing Python, with exposure to PyTorch or TensorFlow through coursework or projects.

ML & Stats Foundation

A solid base in machine learning, statistics and data analysis fundamentals.

Problem-Solving Mindset

You break down ambiguous problems methodically and enjoy debugging your way to a working solution.

Team Player

Genuinely enjoys building alongside others — engineering, product and research will all be in your daily loop.

GOOD TO HAVE

- An internship or project in AI / Data Science — published, deployed or just demoed to your class, all count
- Any personal GenAI build: a chatbot, a RAG app, a fine-tuned model, a Kaggle notebook you're proud of
- Contributions to open-source ML/AI repos or active participation in AI communities and hackathons
